

Tasks:

- “Allow the User to View a List of Posts that they Individually Made”
- Allow the user to modify their profile picture and delete this profile

is dependent on Task:

- “Allow Each User on the Platform to have the Ability to Click and See a Detailed View of Each Post”.

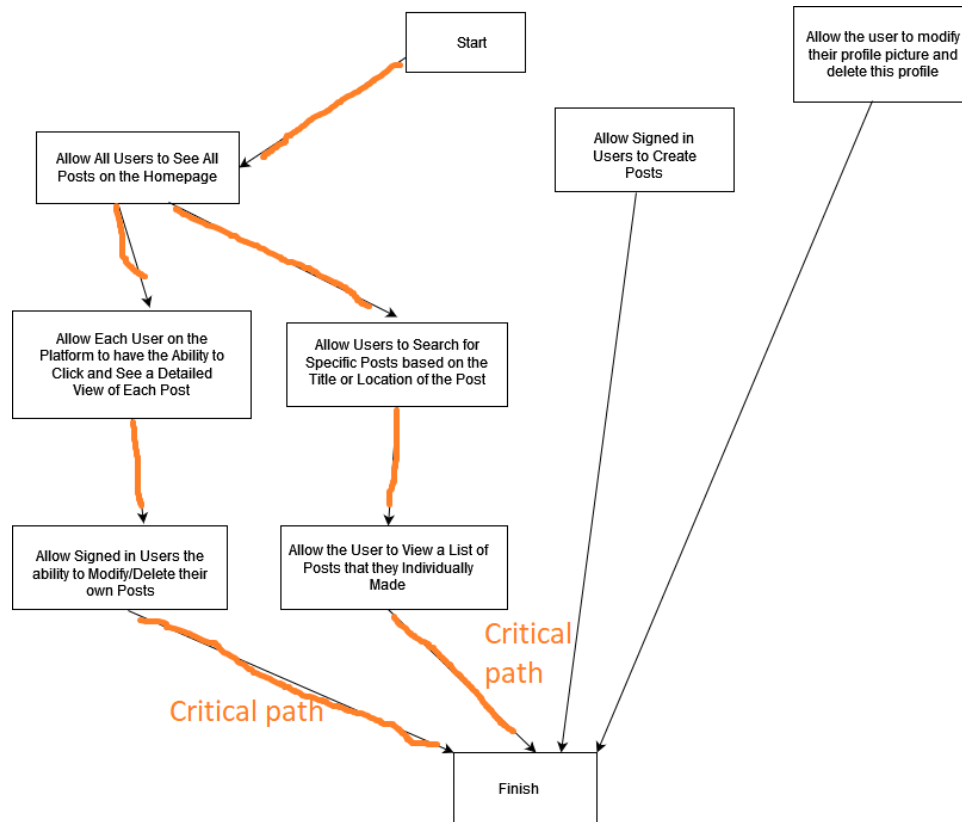

While Task:

- “Allow Each User on the Platform to have the Ability to Click and See a Detailed View of Each Post”.
- Allow Users to Search for Specific Posts based on the Title or Location of the Post

is dependent on Task:

- Allow All Users to See All Posts on the Homepage

The critical path is therefore as follows:

In order to keep up with our sprint schedule, we divide the top part of the critical path and its subsequent path to each individual team member at the beginning and let the person at the top feature to work as soon as possible. After that member finishes their part and they will message everyone in the group and quickly recap what they did with their part. Then the next member that is assigned to the subtask of the top feature will work as fast as possible. And the process is repeated until all subsequent critical paths are finished and we will work on the remaining independent features.
